

DRAG evidence graphs expose typed biological neighborhoods

Real trace subgraphs: vector edges provide representation-neighbor context; BLAST edges attach alignment-supported evidence.

A. DNA/cDNA IGKV evidence subgraph

18 nodes, 25 edges | 25 vector, 6 BLAST | 10 focus-labeled nodes

B. Protein yfbR evidence subgraph

19 nodes, 29 edges | 19 vector, 15 BLAST | 19 focus-labeled nodes
